2023-02-10

Excellency,

I have the honour to inform you that the International Atomic Energy Agency (IAEA) will hold the **International Workshop on Instrumentation and Control and Computer Security for Small Modular Reactors** (hereinafter referred to as event") in Paris, France, from **20 to 24 March 2023**.

In addition, the event will allow for virtual participation via Cisco WebEx.

The purpose of the event is to enhance the participants' understanding of, and to support the development of technical capabilities related to, computer security and instrumentation and control for small modular reactors and microreactors.

The event will be held in English.

I should be grateful if your Government would recommend experts to be designated by the Secretariat as participants in the event. The experts should have previously been involved in the conduct of various IAEA events on computer and information security for nuclear security, and have specialized knowledge of industrial control systems, cybersecurity and nuclear technology. Member States are strongly encouraged to identify suitable women participants.

We understand that all expenses incurred in connection with the experts' services will be paid by the experts' authorities.

It should be noted that compensation is not payable by the IAEA for any damage to or loss of personal property. The IAEA also does not provide health insurance coverage for participants in IAEA events. Arrangements for private insurance coverage on an individual basis should therefore be made. The IAEA will, however, provide insurance coverage for accidents and illnesses that clearly result from any work performed for the IAEA.

The IAEA takes no responsibility for, and the provider of the virtual meeting services has represented and warranted that the Services shall not contain, and that no end user shall receive from the software used to hold the virtual meeting, any virus, worm, trap door, back door, timer, clock, counter or other limiting routine, instruction or design, or other malicious, illicit or similar unrequested code, including surveillance software or routines which may, or is designed to, permit access by any person, or on its own, to erase, or otherwise harm or modify any data or any system, server, facility or other infrastructure of any end user (collectively, a "Disabling Code").

I would appreciate receiving your Government's response not later than **8 March 2023**.

Accept, Excellency, the assurances of my highest consideration.

Elena Buglova  
Director  
Division of Nuclear Security  
Department of Nuclear Safety and Security
